Biases keep us from being rich The average investor earned just 3.79% annually while the market index earned 11% over the last 30 years. Why? Despite overwhelming evidence that a stock market index fund beat stock pickers most of the time, most investors act as if they are successful Wall Street traders. In one study, investors were asked about their acumen, "Nearly two-thirds rated their financial sophistication as advanced." Yet their test scores showed most failed financial literacy. Are we born overconfident? Optimism is a wonderful trait we all prize in ourselves and loved ones. Life would be impossible without it. But for financial decisions, overconfidence makes bad decisions worse. When we don't sell a loser early (sunk cost fallacy), we tend to remember the outcome better than it was (hindsight bias). We don't learn from our mistakes. We continue in our beliefs because we find proofs (confirmation bias). We don't blame ourselves (attribution bias). We even make up a different history of some investments so we "win." We live in Wobegon where "all the children are above average." I can't control the markets but I can control my biases.

Financial literacy and financial education are not new topics, even though interest in these topics among policymakers, financial authorities, and academics continues to grow. The Routledge Handbook of Financial Literacy provides a comprehensive reference work that addresses both research perspectives and practical applications to financial education. This is the first volume to summarize the milestones of research in financial literacy from multiple perspectives to offer an overview. The book is organized into six parts. The first three parts provide a conceptual framework, which discusses what financial literacy is, how it should be measured, and explains why it represents a relevant topic and effective tool in enhancing decision-making among consumers as well as consumer protection strategies. Part IV addresses the connection between financial education and financial literacy, with chapters about financial education in school settings as well as for adults. This part includes an analysis of the role of Fintech and the use of gamification in financial education. Part V is a collection of contributions that analyze financial literacy and financial education around the world, with a focus on geographical areas including the U.S., South America, Western Europe, Eastern Europe, Asia, and Africa. This part also considers how financial literacy should be addressed in the case of Islamic finance. The concluding part of the book examines how financial literacy is related to other possible approaches to consumer finance and consumer protection, addressing the relationships between financial literacy and behavioral economics, financial well-being, and financial inclusion. This volume is an indispensable reference for scholars who are new to the topic, including undergraduate and graduate students, and for experienced researchers who wish to enrich their knowledge, policymakers seeking a broader understanding and an international perspective, and practitioners who seek knowledge of best practices as well as innovative approaches.

College students are particularly vulnerable to making poor financial decisions. One method of addressing personal finances and financial stress among students of higher education is through university based financial education programs. Student Financial Literacy: Program Development presents effective strategies to assist in the implementation or the enhancement of a program as a tool to improve students ' educational experience and financial well-being. It presents the key components of financial education programs designed to address the growing concerns associated with high levels of debt and low levels of financial literacy among college students. " Student Financial Literacy: Campus-Based Program Development is packed with financial education and counseling information and guidance. It was very difficult to write this review as I wanted to share ALL the excellent direction this book provides... The editors and contributing authors have developed an excellent resource for not only those interested in developing or enhancing a campus-based financial education program but also for anyone involved in financial education, counseling, and planning. " -Rebecca J. Travnichek, Family Financial Education Specialist, University of Missouri Extension Journal of Financial Counseling and Planning

The OECD Programme for International Student Assessment (PISA) examines not just what students know in science, reading and mathematics, but what they can do with what they know. Results from PISA show educators and policy makers the quality and equity of learning outcomes achieved elsewhere.
