Are you looking for a resource that provides a real-life, hands-on opportunity to participate in the document-production process of a typical healthcare provider? As a medical transcriptionist, you will be expected to transcribe patient information and documentation using highly specialized language on the most up-to-date technical computer platforms and software programs. MEDICAL TRANSCRIPTION PROJECTS enables you to practice your working knowledge of the medical reports most commonly used in hospital and ambulatory care settings as you transcribe reports dictated by real physicians taken from reports of actual patients. Inside you will find the tools you need to practice everything from proofreading skills and listening to and editing speech-recognition-generated documents to formatting medical reports in accordance with the established guidelines of the AHDI and completing cloze exercises which will encourage your understanding of medical terminology in the context of a medical report. exercises with answer keys are included. A bonus CD-ROM contains audio dictation files encompassing various orthopaedic topics, dictation styles, and accents. Answer keys provide remediation for common errors. The CD-ROM also includes an audio pronunciation glossary, crossword puzzles, and matching, fill-in-the-blank, multiple-choice, figure labeling, and spelling bee exercises.

This text with accompanying CD-ROM provides medical transcription students and professionals with nearly 50 comprehensive reports that will teach them how to transcribe accurate and reliable reports. Included are medical transcription exercises with recorded dictation reports; surgical terminology with definitions and illustrations when applicable; proofreading exercises to ensure the report is transcribed accurately; and editing exercises which involve correcting the physician's grammatical errors and rewriting the report to make doctors' notes readable and understandable. Answer keys with errors highlighted and appropriate remediation are given for each section, and audio pronunciation for the medical terminology section is on the CD-ROM. This reliable resource will not only save educators time in making up their own exercises, but will also help students and veteran transcriptionists gain confidence in transcribing their reports.

This innovative, hands-on text guides readers through progressively more difficult scenario drills and office simulations, helping them gain confidence as they master valuable transcription skills. Using a building block format, the first unit presents fundamental skills and knowledge that are essential to medical transcription practice, and the second unit lets readers take on the role of a medical transcriptionist working at an outpatient health care center. Students gain real-world feedback on their transcription skills with interactive exercises on CD-ROM with a Production for Pay Summary feature that calculates their adjusted earnings per

hour for each document they complete. An Error Analysis chart categorizes and tracks undetected errors by noting the occurrence of repeated types of mistakes so students can track their own progress and learn more effectively. The modular, building-block approach presents segments of information followed immediately by exercises that reinforce material, so students can continually progress to new topics. Competency-based, programmed learning approach makes it easy to clearly identify and measure the student's progress. Real-world practice scenarios place the student in a simulated "employee" role, providing a sense of on-the-job training for a fictitious health care center with its own rules and procedures. An Error Analysis chart for each document categorizes and tracks undetected errors by noting the occurrence of repeated types of mistakes (differentiating between medical language errors and English language errors) so students can identify problem areas and improve performance. Production for Pay Summary feature replaces the traditional evaluation process, recording how quickly the document was created, subtracting credit for errors, and calculating the student's adjusted earnings per hour for that document - just like earning a paycheck. A Microsoft Word compatible CD-ROM offers pre-tests and post-tests, proofreading exercises, and actual transcription exercises, plus an office simulation program that offers additional transcription practice with a self-correcting feature that gives automatic feedback on the student's accuracy.

This innovative text uses a simulation approach to give readers interested in healthcare documentation and medical transcription careers a working knowledge of medical reports common in both acute and chronic care settings. Readers have access to transcription of 107 patient medical reports, including 56 new reports exclusive to the Eighth Edition. This edition also features 20 new speech recognition technology/medical editing (SRT) reports, as well as information on electronic health records (EHRs), quality assurance (QA), and scribes to keep readers up-to-date on the latest advances in the field. Organized by body system, the text
