The goal of the O'Leary Series is to give students a basic understanding of computing concepts and to build the skills necessary to ensure that information technology is an advantage in whatever career they choose in life. The O'Leary Microsoft Office 2003 texts are crafted to be the true step-by-step way for students to develop Microsoft Office application skills. The text design emphasizes step-by-step instructions with full screen captures that illustrate the results of each step performed. Each Tutorial (chapter) combines conceptual coverage with detailed software-specific instructions. A running case that is featured in each tutorial highlights the real-world applications of each software program and leads students step-by-step from problem to solution.

Comprised of short, easy-to-follow tasks, this book shows the reader how to accomplish basic Word tasks quickly and efficiently.

The I-Series leads the student through clear, error-free, and unambiguous steps to accomplish tasks that produce a finished document, work sheet or database table. The approach is not simply results-oriented; teaching how to accomplish a task is not enough for complete understanding and mastery. Prior to introducing steps, the authors discuss why each step is important and what roll all the steps play in the overall plan for creating a document, workbook or database. The I-Series Applications textbooks strongly emphasize that students learn and master applications skills by being actively engaged by doing.

An introduction to the Microsoft Office 2003 suite describes the latest features and functions of the various applications--Word, Excel, Access, PowerPoint, Exchange, FrontPage and Publisher.
